

Swajan Rajbanshi

Kathmandu, Nepal | 9846798082 | swajanshrestha3180@gmail.com

SUMMARY

BSc (Hons) Computing graduate with hands-on experience in full-stack web development, object-oriented systems, and game design. Currently building practical QA skills — writing automated tests with Playwright, testing APIs with Postman, and applying structured test thinking to real applications. Developer background gives a strong understanding of how software is built and where it can break. Open to Junior QA Engineer, QA Intern, and Software Developer roles.

EXPERIENCE

Front-End Developer Intern · Crimson Tech

3 Months | Kathmandu

- Built and maintained web application features using React flow and JavaScript.
- Integrated React Flow for dynamic node-based UI components and handled basic backend wiring for data flow.
- Designed and executed manual test cases for front-end components, identifying and documenting UI inconsistencies across key user flows.
- Explored and manually tested React Flow components to catch edge cases and unexpected UI behaviour, logging findings for the development team.
- Collaborated with team using Git for version control, managing branches and resolving merge conflicts across a shared repo.

PROJECTS

QA Automation Suite · Playwright · GitHub · Postman

2026

- Wrote automated tests for a demo web app using Playwright — covering login, cart, and checkout flows, including what happens when users enter wrong inputs.
- Organized tests using Page Object Model — keeping each page's actions in its own file so tests are easy to read and update.
- Set up GitHub Actions to automatically run all tests on every code push, with an HTML report generated to show results.
- Tested API endpoints using Postman — sending requests and checking that responses returned the correct data and status codes.

Turn-Based Card Strategy Game · Godot · GDScript · Agile · GitHub

2024 – 2025

- Designed and shipped a full-featured card game with player mechanics, enemy AI, drag-and-drop card interactions, and complete battle systems (health, mana, enemy intent displays).
- Built AI opponent using probability-based decision logic; state machine architecture handled 10+ distinct game states cleanly.
- Managed development lifecycle using Agile workflow and GitHub version control across iterative sprints.

Portfolio Website · HTML · CSS · JavaScript · Responsive Design

2024

- Designed and developed a personal portfolio site with responsive UI/UX, integrated project showcases, and mobile-first layout principles.
- Achieved clean navigation across 3+ project entries with minimal load time and zero reported layout breaks across viewports.

Food Market Website · PHP · JavaScript · CSS · MySQL

2023

- Built a functional e-commerce site end-to-end: product listings, cart flow, and checkout — simulating a real retail purchase experience.
- Implemented server-side PHP logic for product management and session handling.
- Worked in a team environment with separate back-end and UI developers.
- Manually tested end-to-end purchase flows including cart, checkout, and session handling — documented test cases covering happy path and edge case scenarios.

Brochure & Promo Design · Adobe Illustrator · Photoshop · Premiere Pro

2023

- Produced full cross-media brand package for a fictional bike brand: logo, print brochure, and promotional video.

TECHNICAL SKILLS

Languages: Java, Python, C++, C#, JavaScript, PHP, SQL, HTML, CSS, GDScript

Frameworks & Tools: React, React Flow, Playwright, Postman, Git, GitHub, VS Code

Game Dev: Godot Engine, GDScript, probability-based AI, UI systems

Design: Adobe Photoshop, Illustrator, Premiere Pro, UI/UX principles, responsive design

Concepts: OOP, Data Structures, Agile Development, REST APIs, Version Control, Software Testing Life Cycle (STLC), Defect Management, Test Automation

Soft Skills: Problem-solving, adaptability, teamwork, creativity, explaining technical concepts clearly, instructional communication (teaching & STEM facilitation experience)

EDUCATION

BSc (Hons) Computing · The British College (Leeds Beckett University)

2021 – 2025

Relevant Modules: Web Development, Java, Python, C++, C#, Machine Learning, Data Analysis (R), SQL (Oracle Apex), PHP, Networking

Higher Secondary Education (Science) · Uniglobe College

Completed October 2021

Secondary Education (SEE) · GEMS School

Completed June 2019
